DCS-7513 Full HD WDR Day & Night Outdoor Network Camera

Wire in Bracket and Mounting Shoe

CAT5 Ethernet cable

Power adapter

CD-ROM with User Manual and software

Mounting Plate

Alignment Sticker and Fixings Kit

Quick Installation Guide

If any of the above items are missing, please contact your reseller.

Note: Using a power supply with a different voltage than the one included with your product will cause damage and void the warranty for this product.

Introduction

The DCS-7513 Full HD WDR Day & Night Outdoor Network Camera is a professional surveillance and security solution for small, medium, and large enterprises alike. The DCS-7513 uses a 2 megapixel progressive scan CMOS sensor; the professional sensor results in low noise and high sensitivity capabilities ideal for surveillance applications.

The DCS-7513 is equipped with a P-iris lens that controls the iris with extreme precision. It's built-in stepping motor maintains the iris opening at an optimal level at all times, resulting in superior image clarity and depth of field as well as image quality. Together with WDR enhancement, users can identify image details in extremely bright as well as dark environments.

The DCS-7513 has an IP66 certified weatherproof housing designed for both indoor and outdoor applications. The built-in removable IR-cut filter and IR LEDs give the DCS-7513 the capability to view up to 30M at night. The DCS-7513 also incorporates Power over Ethernet (PoE), allowing it to be easily installed in a variety of locations without the need for supplemental power cabling. The combination of IP66 housing, IR-Cut Filter, IR LEDs and PoE make the DCS-7513 an ideal solution for a high performance, reliable and cost-effective 24 hour megapixel surveillance solution with an easy clutter-free installation.

System Requirements

- Computer with Microsoft Windows® 7, Vista®, or XP (for CD-ROM Setup Wizard), Mac OS or Linux
- PC with 1.3GHz or above; at least 128MB RAM
- Internet Explorer 7 or above , Firefox 3.5 or above, Safari 4 and Chrome 8.0 or above
- Existing 10/100 Ethernet-based network
- An SD memory card (optional) is required for recording to onboard storage. SDHC Class 6 or above is recommended.
- Broadband Internet connection

Features

P-iris

The P-iris lens in the DCS-7513 solves the long-standing problem of capturing sharp images in varying light conditions. The the DCS-7513 optimizes the iris opening under all lighting conditions and the result is images with better contrast, clarity, resolution and depth of field with improved image sharpness and increased image usability for network video surveillance.

Remote Zoom & Focus

The remote focus function eliminates the need for manual focusing at the camera position and allowing the user to make key adjustments from any computer. The remote zoom functionality allows the user to make final adjustments to the zoom from the computer. It provides a convenient way to ensure that the viewing angle is optimized for the scene and required need for resolution.

Wide Dynamic Range

Wide Dynamic Range technology neutralizes imperfect lighting, providing clear images with the right amount of contrast even when a subject is backlit

Automatic Thermostat Temperature Regulation

The DCS-7513 monitors and automatically regulates its temperature to ensure it can perform at its optimal ability. It balances fan use against a built in heater based on a range of preset thermostatic settings. This gives the DCS-7513 the ability to perform in the most demanding of environments.

Remote Monitoring Utility

The D-ViewCam application adds enhanced features and functionality for the Network Camera and allows administrators to configure and access the Network Camera from a remote site via Intranet or Internet. Other features include image monitoring, recording images to a hard drive, viewing up to 32 cameras on one screen, and taking snapshots.

IR LED for Day and Night Functionality

The built-in infrared LEDs enables night time viewing of up to 30 meters (98 feet).

IP66 Weatherproof Housing

The DCS-7513 uses an IP66 weatherproof housing, allowing you to rest assured that in the toughest of conditions, it will continue to provide round-the-clock surveillance.

PoE (Power over Ethernet) for Flexible Installation

The DCS-7513 can draw all the power it needs from a PoE switch or PoE injector for a simple and clutter-free installation.

Hardware Overview

Front

1	Camera Lens	Vari-focal lens to record video of the surrounding area
2	Light Sensor	The light sensor measures the lighting conditions and switches between color and infrared accordingly
3	IR LEDs	Infrared LEDs illuminate the camera's field of view at night
4	Power/Status LED	Indicates the camera's current status
5	Weatherproof Casing	The camera is housed in an IP66 certified weatherproof casing, which protects it against rain and dust.

Sides

1	Adjustable Top Shield	Shields the camera sensor from direct sunlight.
2	Adjustment Screw	Allows positioning of top shield.
3	Camera Shoe	Adjustable mounting seat.
4	Wire in Bracket	Tightly assembles and protects the cables from outdoor wear and tear.
5	Cable Channel	Channel for cable placement.
6	Quick Release Rod	Allows the camera to be swiveled into position for easy maintenance.

Cable Harness

1	Power Connector	Power connector for the provided 12V DC power adapter.
2	Audio In (Red)	Connects to a microphone.
3	Audio Out (Green)	Connects to a speaker.
4	BNC Connector	The BNC connector is recommended for use with handheld monitors to check the Field of View during installation.
5	Reset Button	Press and hold the recessed button for 10 seconds to reset the camera.
6	24 V Power Connector	Connects to 24 V AC power supply.
7	DI/DO Connector	I/O connectors for external devices. 12V DC output.
8	Ethernet Jack	Connects to an RJ45 Ethernet port. Can be used with PoE to provide power to the camera.

Internal

1

SD Card Slot

Insert an SD card for Local storage for storing recorded image and video

Note: For step-by-step instruction on how to insert an SD card please skip to "Installing an SD Card" on page 11.

Assembly and Installation

Installing an SD Card

Step 1

Place the camera face down on a non-slip flat surface.

Step 2

Remove the adjustable top shield by removing the two retaining screws.

Step 3

Remove the base of the camera by holding the camera firmly and rotating the base in a counter clockwise direction.

Step 4

Insert your SD memory card into the slot with the notch oriented to the fore of the camera.

Step 5

Replace the base of the camera by holding the camera firmly and rotating the base in a clockwise direction ensuring a tight fit.

Note: Users are advised to ensure that the weatherproof seals are secured firmly in place.

Mounting the Camera

The DCS-7513 is suitable for mounting to a wall using the camera shoe and wire-in bracket provided.

Step 1

Straighten the two sets of cables from the camera side by side.

Step 2

Pass individual cables into the wire-in bracket ensuring the head of each has fully passed through the bend.

Step 3

Once all the cables are in the wire-in bracket push the cable until you are able to pull them through the base of the bracket.

Step 4

Attach the camera bracket to the wire-in bracket following the steps outlined in "Attaching the Camera to the Wire-in Bracket" on page 14.

Attaching the Camera to the Wire-in Bracket

Note:

Before attaching the camera to the wire-in bracket, ensure the camera shoe is oriented correctly for its final position. For instructions on how to orient the camera shoe skip to "Orienting the Camera" on page 16.

Step 1

Using the two screws provided attach the quick release retention clip to the underside of the camera.

Step 2

Push the quick release rod to reveal the attachment notches.

Step 3

Slot the quick release retention clip over the quick release rod.

Step 4

Allow the quick release rod to return.

Step 5

Using the Allen Wrench provided, tighten the two remaining fixing bolts.

Orienting the Camera

The DCS-7513 can be adjusted to ensure an optimal viewing position when mounted to a wall by following the steps outlined.

Step 1

Using the Allen Wrench provided, loosen the adjusting bolts on both sides of the camera shoe. This will allow you to adjust the vertical orientation of the camera.

Step 2

Firmly tighten the adjustment bolts on both sides of the camera shoe.

Step 3

Using the Allen Wrench provided, loosen the adjusting bolts on both sides of the wire-in bracket. This will allow you to adjust the horizontal orientation of the camera.

Step 4

Firmly tighten the adjustment bolts on both sides of the wire-in bracket.

Deploying the Camera

Note: Before deploying the camera to a fixed location, it is recommended that you take a photo from the desired location to ensure an adequate field-of-view.

Step 1

Position the Alignment Sticker in the desired location making sure the Camera and Wire-in-Bracket have sufficient space. Use the dimension diagrams in "Dimensions" on page 71 for additional reference.

Step 2

Use a 6mm drill bit to make required holes approximately 30mm deep.

Step 3

Remove the Alignment Sticker.

Step 4

Insert wall anchors and affix the mounting plate using the screws provided.

Step 5

Suspend the camera and wire-in bracket from the two lugs on the mounting plate.

Step 6

Fasten the camera firmly to the mounting plate using the screw provided ensuring clear passage for the cables through the cable channel or via the mounting plate cut-out.

Camera Installation Wizard

General Connection Using 12 V DC Power Adapter

Step 1

Connect the network camera to a hub via an Ethernet cable.

Step 2

Connect the supplied power cable from the camera to a power outlet.

General Connection Using 24 V AC Power Wiring

Step 1

Connect the network camera to a hub via an Ethernet cable.

Step 2

Connect the supplied power cable from the camera to a power source such as your building's emergency power.

Connection Using Power over Ethernet

Step 1

If you are using a PoE hub, connect the IP camera to the hub via an Ethernet cable, which will provide transmission of both power and data over a single cable.

Software Installation

Step 1

Insert the Installation CD-ROM into your computer's optical drive to start the autorun program.

The CD-ROM will open the Camera Installation Wizard. The Setup Wizard will guide you through the installation process through to configuring your camera.

Note:

If the autorun program does not automatically start on your computer, go to Windows, click **Start** > **Run**. In the Run command box type **D:\DCS7513.exe**, where D: represents your CD-ROM drive.

Step 2

Accept the End User Licence Agreement and follow the on screen prompts to install the Camera Installation Wizard.

Step 3

Select your camera from the list, then click **Wizard**. If you have multiple cameras, you can identify them by the MAC ID printed on the label on the back of your camera.

Step 4

By default the **Admin ID** is "admin" and the password is blank.

It is recommended that you create and confirm a password for your device. Click **Next** to continue.

The screenshot shows the 'Set up an Admin ID and Password to secure your camera.' screen. It has a header with the D-Link logo and 'SECURICAM Network'. The main text says 'Set up an Admin ID and Password to secure your camera. Click Next to continue.' There are two columns of input fields. The first column is for the Admin ID, with a 'Change' checkbox, 'New ID', and 'Reconfirm' fields. The second column is for the Password, with a 'Change' checkbox, 'New Password', and 'Reconfirm' fields. At the bottom right are three buttons: 'Back' (left arrow), 'Next' (right arrow), and 'Exit' (red square with white 'X').

Step 5

Select **Static IP** if your Internet Service Provider has provided you with connection settings, or if you wish to set a static address within your home network. Enter the correct configuration information and click **Next** to continue.

Note: Select DHCP if you are unsure of which settings to choose.

Click **Next** to continue.

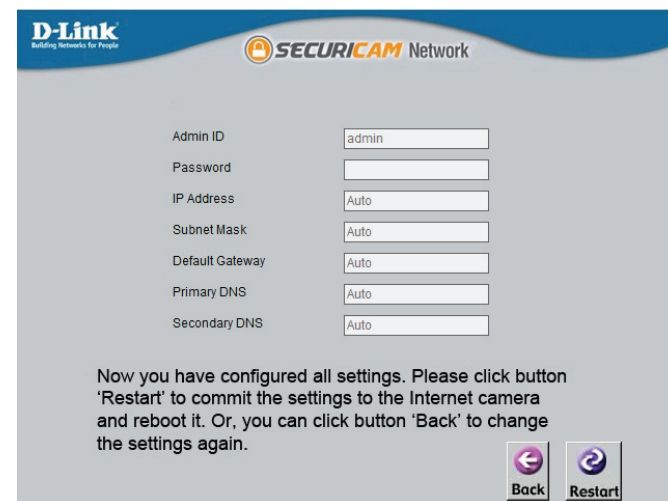

The screenshot shows the 'Set IP Address' screen. It has a header with the D-Link logo and 'SECURICAM Network'. The main text says 'Set IP Address'. There are two radio buttons: 'DHCP' (selected) and 'Static IP'. Below the radio buttons are five input fields: 'IP Address', 'Subnet Mask', 'Default Gateway', 'Primary DNS', and 'Secondary DNS'. At the bottom right are three buttons: 'Back' (left arrow), 'Next' (right arrow), and 'Exit' (red square with white 'X').

Step 6

Confirm your camera login details and IP address details and click **Restart**.

The LED on the front of the DCS-7513 will blink, then turn solid green once it successfully connects to your network..

D-Link Building Networks for People SECURICAM Network

Admin ID:

Password:

IP Address:

Subnet Mask:

Default Gateway:

Primary DNS:

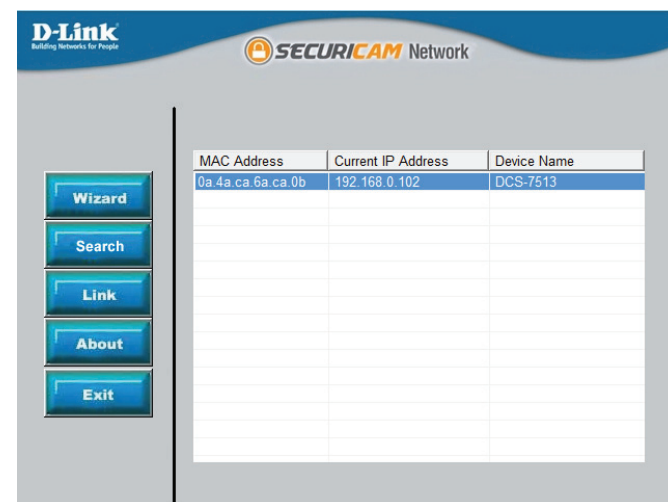

Secondary DNS:

Now you have configured all settings. Please click button 'Restart' to commit the settings to the Internet camera and reboot it. Or, you can click button 'Back' to change the settings again.

[Back](#) [Restart](#)

Step 7

Your DCS-7513 camera is now set up, Click **Exit** to exit the wizard and can skip to "Configuration" on page 27 for advanced configuration of your camera.

MAC Address	Current IP Address	Device Name
0a:4a:ca:6a:ca:0b	192.168.0.102	DCS-7513

D-ViewCam Setup Wizard

D-ViewCam software is included for the administrator to manage multiple D-Link IP cameras remotely. You may use the software to configure all the advanced settings for your cameras. D-ViewCam is a comprehensive management tool for IP surveillance.

Step 1

Insert the CD-ROM into the CD-ROM drive. Click "Install D-ViewCam Software" from menu, and select "D-ViewCam" to install the VMS software.

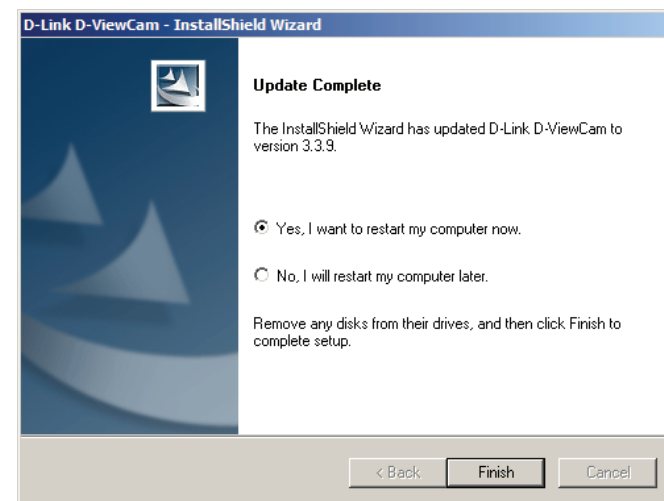

Step 2

Follow the Installation Wizard to install D-ViewCam.

Step 3

Click **Finish** to complete the installation.

Step 4

To start D-ViewCam, select **Start > All Programs > D-Link D-ViewCam > Main Console**.

Step 5

For more detail operation of using D-ViewCam software, please refer to D-ViewCam Manual.

Configuration

Using the Configuration Interface

After completing the Camera Installation Wizard, you are ready to use your camera. The camera's built-in Web configuration utility is designed to allow you to easily access and configure your DCS-7513. At the end of the wizard, click **Link**, or enter the IP address of your camera into a web browser, such as Mozilla Firefox. To log in, use the User name **admin** and the password you created in the Installation Wizard. If you did not create a password, the default password is blank. After entering your password, click **OK**.

Step 1

Click the **Link** button on the Wizard.

The Setup Wizard will automatically open your web browser to the IP address of the camera.

Step 2

Enter your credentials to access the configuration interface.

Live Video

This section shows your camera's live video. You may select any of the available icons listed below to operate the camera. You may also select your language using the drop-down menu on the left side of the screen.

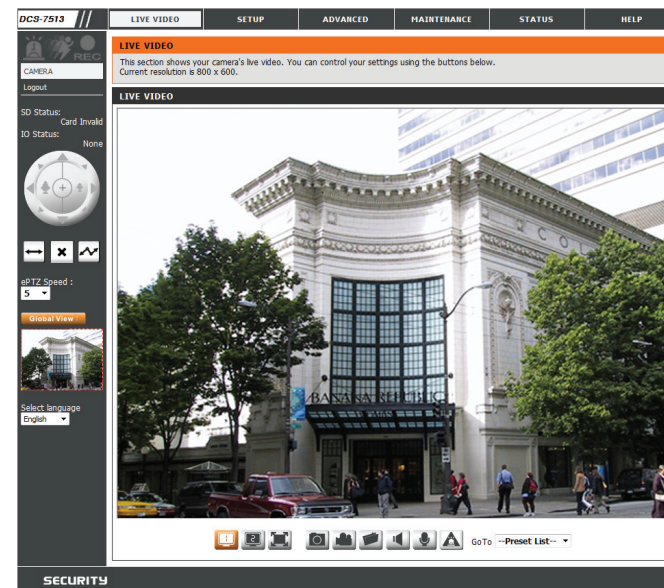

You can zoom in and out on the live video image using your mouse. Right-click to zoom out or left-click to zoom in on the image.

SD Status: This option displays the status of the SD card. If no SD card has been inserted, this screen will display the message "Card Invalid."

IO Status: This option displays the status of your I/O device if a device has been connected.

	Digital Input Indicator	This indicator will change color when a digital input signal is detected.
	Motion Trigger Indicator	This indicator will change color when a trigger event occurs. Note: The video motion feature for your camera must be enabled.
	Recording Indicator	When a recording is in progress, this indicator will change color.
	Control Pad	This control pad can be used to electronically pan, tilt, and zoom (ePTZ) within the camera's predefined view area, if one has been defined.
	Auto Pan	Starts the automatic panning function. The ROI will pan from back and forth within the FOV
	Stop	Stops the camera ePTZ motion
	Preset Path	Starts the camera's motion along the predefined path

ePTZ Speed: You may select a value between 0 and 10. 0 is the slowest and 10 is the fastest.

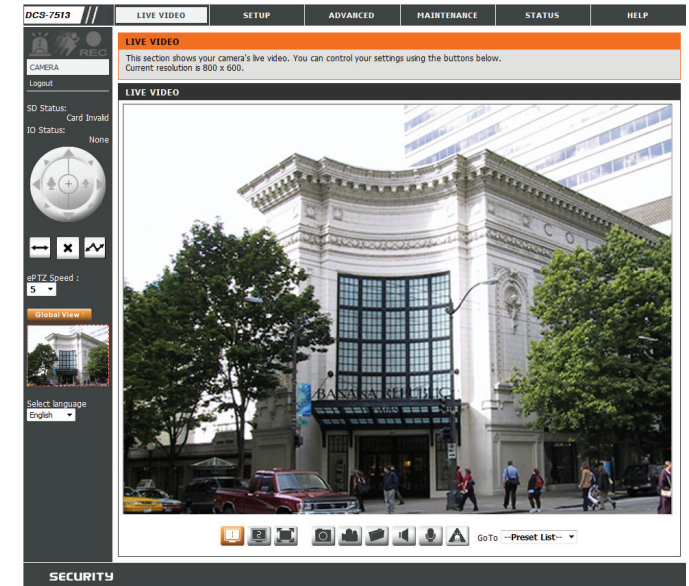

Global View: This window indicates the total field of view (FOV) of the camera. The red box indicates the visible region of interest (ROI).

Language: You may select the interface language using this menu.

- | | |
|---|--|
|  Video Profile 1 |  Record a Video Clip |
|  Video Profile 2 |  Set a Storage Folder |
|  Video Profile 3 |  Listen/Stop Audio In (from microphone) |
|  Full screen mode |  Start/Stop Audio Out (to speaker) |
|  Taking a Snapshot |  Start/Stop Digital Output |

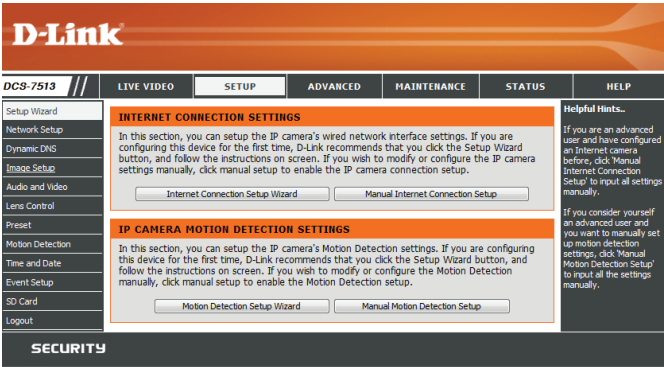

Go To: If any presets have been defined, selecting a preset from this list will (**Preset List**) display it.

Setup Setup Wizard

To configure your Network Camera, click **Internet Connection Setup Wizard**. Alternatively, you may click **Manual Internet Connection Setup** to manually configure your Network Camera and skip to "Network Setup" on page 36.

To quickly configure your Network Camera's motion detection settings, click **Motion Detection Setup Wizard**. If you want to enter your settings without running the wizard, click **Manual Motion Detection Setup** and skip to "Motion Detection" on page 47.

Internet Connection Setup Wizard

This wizard will guide you through a step-by-step process to configure your new D-Link Camera and connect the camera to the internet. Click **Next** to continue.

Note: Select DHCP if you are unsure of which settings to choose.

Click **Next** to continue.

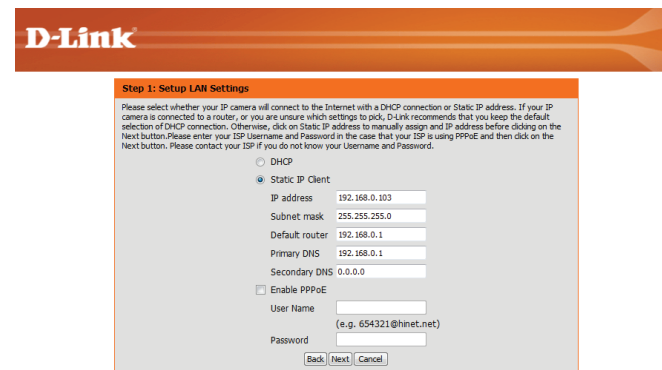

Section 3: Configuration

Select **Static IP** if your Internet Service Provider has provided you with connection settings, or if you wish to set a static address within your home network. Enter the correct configuration information and click **Next** to continue.

If you are using PPPoE, select **Enable PPPoE** and enter your user name and password, otherwise click **Next** to continue.

If you have a Dynamic DNS account and would like the camera to update your IP address automatically, Select **Enable DDNS** and enter your host information. Click **Next** to continue.

Enter a name for your camera and click **Next** to continue.

D-Link

Step 1: Setup LAN Settings

Please select whether your IP camera will connect to the Internet with a DHCP connection or Static IP address. If your IP camera is connected to a router, or you are unsure which settings to pick, D-Link recommends that you keep the default selection of DHCP connection. Otherwise, click on Static IP address to manually assign and IP address before clicking on the Next button. Please enter your ISP Username and Password in the case that your ISP is using PPPoE and then click on the Next button. Please contact your ISP if you do not know your Username and Password.

☐ DHCP

☒ Static IP Client

D-Link

Step 3: IP camera Name Settings

D-Link recommends that you rename your IP camera for easy accessibility. You can then identify and connect to your IP camera via this name. Please assign a name of your choice before clicking on the Next button.

IP camera Name DCS-7513

Back Next Cancel

Section 3: Configuration

Configure the correct time to ensure that all events will be triggered as scheduled. Click **Next** to continue.

Confirm the settings are correct and click **Apply** to save them.

The settings will be saved to the DCS-7513 and the camera will restart.

Motion Detection Setup Wizard

This wizard will guide you through a step-by-step process to configure your camera's motion detection functions.

Click **Next** to continue.

Step 1

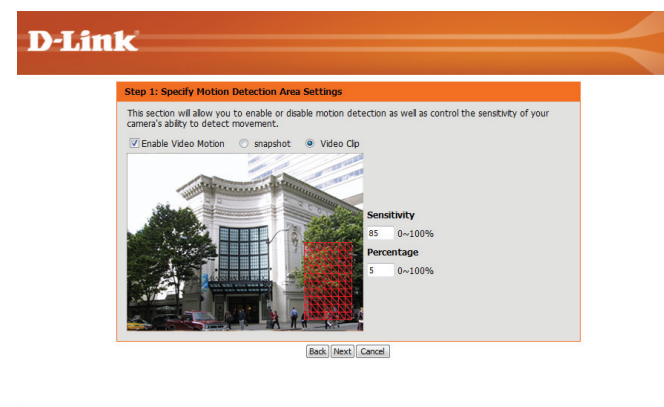

This step will allow you to enable or disable motion detection, specify the detection sensitivity, and adjust the camera's ability to detect movement.

You may specify whether the camera should capture a snapshot or a video clip when motion is detected.

Please see the **Motion Detection** section on "Motion Detection" on page 47 for information about how to configure motion detection.

Step 2

This step allows you to enable motion detection based on a customized schedule. Specify the day and hours. You may also choose to always record whenever motion is detected.

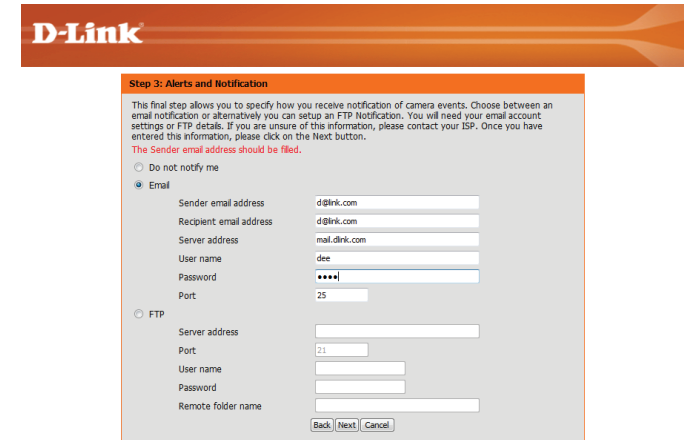

Step 3

This step allows you to specify how you will receive event notifications from your camera. You may choose not to receive notifications, or to receive notifications via e-mail or FTP.

Please enter the relevant information for your e-mail or FTP account.

Click **Next** to continue.

D-Link

Step 3: Alerts and Notification

This final step allows you to specify how you receive notification of camera events. Choose between an email notification or alternatively you can setup an FTP Notification. You will need your email account settings or FTP details. If you are unsure of this information, please contact your ISP. Once you have entered this information, please click on the Next button.

The Sender email address should be filled.

Please wait a few moments while the camera saves your settings and restarts.

D-Link

Step 4: Setup Complete

You have completed your IP camera setup. Please click the Back button if you want to review or modify your settings or click on the Apply button to save and apply your settings.

Changes saved. IP camera's network is restarting, please wait for 6 seconds ...

Back Apply Cancel

Network Setup

Use this section to configure the network connections for your camera. All relevant information must be entered accurately. After making any changes, click the **Save Settings** button to save your changes.

LAN Settings: This section lets you configure settings for your local area network.

DHCP: Select this connection if you have a DHCP server running on your network and would like your camera to obtain an IP address automatically.

If you choose DHCP, you do not need to fill out the IP address settings.

Static IP Client: You may obtain a static or fixed IP address and other network information from your network administrator for your camera. A static IP address may simplify access to your camera in the future.

IP Address: Enter the fixed IP address in this field.

Subnet Mask: This number is used to determine if the destination is in the same subnet. The default value is 255.255.255.0.

Default Gateway: The gateway used to forward frames to destinations in a different subnet. Invalid gateway settings may cause the failure of transmissions to a different subnet.

Primary DNS: The primary domain name server translates names to IP addresses.

Secondary DNS: The secondary DNS acts as a backup to the primary DNS.

IPv6

Helpful Hints.

Select DHCP: ConnectionIf you are running a DHCP server on your network and would like an IP address assigned to your IP camera automatically.

UPnP: Enabling UPnP settings will allow you to configure your IP camera as an UPnP device in the network.

PPPoE Setting: If you use the IP camera to connect directly to the Internet, you will need to enter the username and password, which were given to you when you set up your account with your Internet Service Provider. If the camera is behind a router or a gateway, you do not need to configure this setting.

HTTP: HTTP Port is the port you allocate in order to connect to a IP camera by using streaming mobile device(s), such as a mobile phone or PDA.

HTTPS: HTTPS Port in a IP camera connect it with a PC via a secure web browser.

RTSP: RTSP Port is the port you allocate in order to connect to a IP camera by using streaming mobile device(s), such as a mobile phone or PDA.

CoS (Class of Service): Coarsely-grained traffic control based on the L2 protocol. Class of Service technologies do not guarantee a level of service in terms of bandwidth and delivery time, they offer a "best-effort".

QoS (Quality of Service): Finely-grained traffic control, a resource reservation control mechanism. Quality of service guarantees are important if the network capacity is insufficient, especially for real-time streaming multimedia applications.

Enable IPv6: Select this option and click Save to enable IPv6 setting. Please note that this only works if your network environment and hardware equipment support IPv6. The browser should be Microsoft @ Internet Explorer 6.5, Mozilla Firefox 3.0 or above. When IPv6 is enabled, by default, the Network Camera will listen to router advertisements and be assigned a link-local IPv6 address accordingly.

IPv6 Information: Click this button to obtain the IPv6 information. If your IPv6 setting are successful, the IPv6 address list will be listed.

Enable UPnP Presentation: Enabling this setting allows your camera to be configured as a UPnP device on your network.

Enable UPnP Port Forwarding: Enabling this setting allows the camera to add port forwarding entries into the router automatically on a UPnP capable network.

Enable PPPoE: Enable this setting if your network uses PPPoE.

User Name / Password: Enter the username and password for your PPPoE account. Re-enter your password in the Confirm Password field. You may obtain this information from your ISP.

HTTP Port: The default port number is 80.

Access Name for Stream 1~3: The default name is video#.mjpg, where # is the number of the stream.

HTTPS Port: You may use a PC with a secure browser to connect to the HTTPS port of the camera. The default port number is 443.

Authentication: Choose to enable or disable RTSP digest encryption. Digest encryption uses MD5 hashes.

RTSP Port: The port number that you use for RTSP streaming to mobile devices, such as mobile phones or PDAs. The default port number is 554. You may specify the address of a particular stream. For instance, live1.sdp can be accessed at rtsp://x.x.x.x/video1.sdp where the x.x.x.x represents the ip address of your camera.

Optional IP address / Prefix length: / 64
Optional default router:
Optional primary DNS:

Helpful Hints.

Select DHCP Connection if you are running a DHCP server on your network and would like an IP address assigned to your IP camera automatically.

UPnP: Enabling UPnP settings will allow you to configure your IP camera as an UPnP device in the network.

PPPoE Setting: If you use the IP camera to connect directly to the Internet, you will need to enter the username and password, which were given to you when you set up your account with your Internet Service Provider. If the camera is behind a router or a gateway, you do not need to configure this setting.

HTTP: HTTP Port is the port you allocate in order to connect to the IP camera via a standard web browser.

HTTPS: HTTPS Port is a IP camera connects it with a PC via a secure web browser.

RTSP: RTSP Port is the port you allocate in order to connect to a IP camera by using streaming mobile device(s), such as a mobile phone or PDA.

CoS (Class of Service): Coarsely-grained traffic control based on the IP protocol. Class of Service technologies do not guarantee a level of service in terms of bandwidth and delivery time, they offer a "best-effort".

QoS (Quality of Service): Finely-grained traffic control, a resource reservation control mechanism. Quality of service guarantees are important if the network capacity is insufficient, especially for real-time streaming multimedia applications.

Enable IPv6: Select this option and click Save to enable IPv6 setting. Please note that this only works if your network environment and hardware equipment support IPv6. The browser should be Microsoft® Internet Explorer 6.5, Mozilla Firefox 3.0 or above. When IPv6 is enabled, by default, the network camera will listen to router advertisements and be assigned a link-local IPv6 address accordingly.

IPv6 Information: Click the button to obtain the IPv6 information. If your IPv6 setting are successful, the IPv6 address list will be listed in the pop-up window. Please follow the steps below to link to an IPv6 address:
1) Open your web browser.
2) Enter the link-local or link-local IPv6 address in the address bar of your web browser.
3) Press Enter on the

Enable CoS: Enabling the Class of Service setting implements a best-effort policy without making any bandwidth reservations.

Enable QoS: Enabling QoS allows you to specify a traffic priority policy to ensure a consistent Quality of Service during busy periods. If the Network Camera is connected to a router that itself implements QoS, the router's settings will override the QoS settings of the camera.

Enable IPv6: Enable the IPv6 setting to use the IPv6 protocol. Enabling the option allows you to manually set up the address, specify an optional IP address, specify an optional router and an optional primary DNS.

Enable Multicast for stream The DCS-7513 allows you to multicast each of the available streams via group address and specify the TTL value for each stream. Enter the port and TTL settings you wish to use if you do not want to use the defaults.

The screenshot displays the configuration web interface for the DCS-7513, organized into four main sections: COS SETTINGS, QOS SETTINGS, IPV6, and MULTICAST. On the right side, there are instructional notes for enabling IPv6 and manually setting the IP address.

COS SETTINGS

- ☒ Enable CoS
 - VLAN ID: 1 (range [0~4095])
 - Live video: 0
 - Live audio: 0
 - Event/Alarm: 0
 - Management: 0

QOS SETTINGS

- ☒ Enable QoS
 - Live video: 0
 - Live audio: 0
 - Event/Alarm: 0
 - Management: 0

IPV6

- ☒ Enable IPv6
 - ☒ IPv6 Information
 - Optional IP address / Prefix length: / 64
 - Optional default router:
 - Optional primary DNS:
 - ☐ Manually setup the IP address

MULTICAST

- ☒ Enable multicast for stream 1
 - Multicast group address: 239.1.1.1
 - Multicast video port: 6550
 - Multicast RTP video port: 6551
 - Multicast audio port: 6552
 - Multicast RTP audio port: 6553
 - Multicast TTL [1~255]: 64
- ☒ Enable multicast for stream 2
 - Multicast group address: 239.1.1.2
 - Multicast video port: 6554
 - Multicast RTP video port: 6555
 - Multicast audio port: 6556
 - Multicast RTP audio port: 6557
 - Multicast TTL [1~255]: 64

Buttons at the bottom: Save Settings, Don't Save Settings.

IPv6 Information: Click this button to obtain the IPv6 information. If your IPv6 settings are successful, the IPv6 address list will be listed in the pop-up window. Please follow the steps below to link to an IPv6 address:

- 1) Open your web browser.
- 2) Enter the link-global or link-local IPv6 address in the address bar of your web browser.
- 3) Press Enter on the keyboard or click Refresh button to refresh the webpage.

Manually setup the IP address: Select this option to manually configure IPv6 setting if your network environment does not have DHCPv6 server and advertisements-enabled routers.

Multicast: Click the items to display the detailed configuration information. Select the Always multicast option to enable multicast for stream 1~3. Unicast video transmission delivers a stream through point-to-point transmission; multicast, on the other hand, sends a stream to the multicast group address and allows multiple clients to acquire the stream at the same time by requesting a copy from the multicast group address. Therefore, enabling multicast can

Dynamic DNS

DDNS (Dynamic Domain Name Server) will hold a DNS host name and synchronize the public IP address of the modem when it has been modified. A user name and password are required when using the DDNS service. After making any changes, click the **Save Settings** button to save your changes.

Enable DDNS: Select this checkbox to enable the DDNS function.

Server Address: Select your Dynamic DNS provider from the pull down menu or enter the server address manually.

Host Name: Enter the host name of the DDNS server.

User Name: Enter the user name or e-mail used to connect to your DDNS account.

Password: Enter the password used to connect to your DDNS server account.

Timeout: Enter the DNS timeout values you wish to use.

Status: Indicates the connection status, which is automatically determined by the system.

D-Link

DCS-7513 // LIVE VIDEO SETUP ADVANCED MAINTENANCE STATUS HELP

DYNAMIC DNS

The Dynamic DNS feature allows you to use a domain name that you have purchased (www.yourdomain.com) to access your IP camera with a dynamically assigned IP address. Most broadband Internet service providers assign dynamic (changing) IP addresses. By using a DDNS service, you can enter your domain name to connect to your IP camera no matter what your IP address is.

[Sign up for D-Link's Free DDNS service at www.DLinkDDNS.com.](http://www.dlinkddns.com)

Helpful Hints..

Dynamic DNS is useful if you have a DSL or Cable service provider that changes your modem IP address periodically. This will allow you to assign a website domain name to your IP camera instead of connecting through an IP address.

Image Setup

In this section, you may configure the video image settings for your camera. A preview of the image will be shown in Live Video.

Enable Privacy Mask: The Privacy Mask setting allows you to specify up to 3 rectangular areas on the camera's image to be blocked/excluded from recordings and snapshots.

You may click and drag the mouse cursor over the camera image to draw a mask area. Right clicking on the camera image brings up the following menu options:

Disable All: Disables all mask areas

Enable All: Enables all mask areas

Reset All: Clears all mask areas.

Mirror: This will mirror the image horizontally.

Flip: This will flip the image vertically. When turning Flip on, you may want to consider turning Mirror on as well.

Power Line: Select the frequency used by your power lines to avoid interference or distortion.

White Balance: Use the drop-down box to change white balance settings to help balance colors for different environments. You can choose from Auto, Outdoor, Indoor, Fluorescent, and Push Hold.

Exposure Mode: Changes the exposure mode. Use the drop-down box to set the camera for Indoor, Outdoor, or Night environments, or to Moving to capture moving objects.

Brightness **128**

Contrast **128**

Saturation **128**

Sharpness **128**

WDR Level **WDR** **5**

Reset Default

Helpful Hints...

Privacy Mask: Click the attached box to activate this function. Now use your mouse to draw a rectangle covering the area you want hidden. Click the box again to deactivate the function.

Mirror: This function horizontally reverses your images 180 degrees.

Flip: This function vertically reverses your images 180 degrees.

Power Line: This setting is used to remove 50/60 Hz flicker.

White Balance: White Balance - Is the process of removing unrealistic color casts, so that objects which appear white in person are rendered white in your photo.

Exposure Mode: Exposure is the total amount of light allowed to fall on the image sensor during the process of capturing an image. You may choose different scene modes to produce the better images.

Max Gain: It can always be enabled automatically. But you have an option - you can change Max Gain either automatically or manually.

Iris Adjustment: To achieve special inventive effects or to deal with special lighting situations. The iris also can be adjusted manually.

Iris Speed: To adjust opening and closing speed of the iris from "High" to "Low" steps.

Denoise: It is the process of removing noise from a signal.

Brightness: It is used to compensate for backlight scenes.

Contrast: It may help to improve the image under a dull grey sky.

Saturation: It controls the strength of color from black and white to bold colors.

Sharpness: Controls the amount of sharpening applied to the image.

WDR Level: This function enables the camera to be widely applied in high contrast environments such as lobby entrances, parking lots, ATMs, banking areas, and much more.

SECURITY

The Low Noise option will focus on creating a high-quality picture without noise. You can also create 3 different custom exposure modes. The Max Gain setting will allow you to control the maximum amount of gain to apply to brighten the picture.

Enable Automatic Iris Adjustment Selecting this option will allow the camera to automatically determine the optimal iris adjustment.

Iris Adjustment To counteract difficult lighting scenarios you can manually adjust the camera's iris.

Iris Speed This allows you to select the speed at which iris adjustments take place.

Denoise: This setting controls the amount of noise reduction that will be applied to the picture.

Brightness: Adjust this setting to compensate for backlit subjects.

Contrast: Adjust this setting to alter the color intensity/strength.

Saturation: This setting controls the amount of coloration, from grayscale to fully saturated.

Sharpness: Specify a value from 0 to 128 to specify how much sharpening to apply to the image.

WDR Level: Specify a value from 0 to 10 to specify how much WDR to apply to the image, or select **None**.

Reset Default: Click this button to reset the image to factory default settings.

Audio and Video

You may configure up to 3 video profiles with different settings for your camera. Hence, you may set up different profiles for your computer and mobile display. In addition, you may also configure the two-way audio settings for your camera. After making any changes, click the **Save Settings** button to save your changes.

Aspect ratio: Set the aspect ratio of the video to 4:3 standard or 16:9 widescreen.

Mode: Set the video codec to be used to JPEG, MPEG-4, or H.264.

Frame size / View window area: Frame size determines the total capture resolution, and View window area determines the Live Video viewing window size. If the Frame size is larger than the Live Video size, you can use the ePTZ controls to look around.

16:9	1920 x 1080, 1280 x 720, 800 x 450, 640 x 360, 480 x 270, 320 x 176, 176 x 144 up to 30 fps
4:3	1440 x 1080, 1280 x 960, 1024 x 768, 800 x 600, 640 x 480, 320 x 240, 176 x 144 up to 30 fps

Note: If your View window area is the same as your Frame size, you will not be able to use the ePTZ function.

Maximum frame rate: A higher frame rate provides smoother motion for videos, and requires more bandwidth. Lower frame rates will result in stuttering motion, and requires less bandwidth.

AUDIO AND VIDEO
 This section allows you to configure the sound and video of your camera. You can configure different settings depending on whether you are viewing content from a PC or a Mobile Phone / PDA.
 Save Settings Don't Save Settings

VIDEO SETTINGS
 Number of active profiles: 2
 Aspect ratio: 16:9 **Warning: Change the aspect ratio will clear the settings of privacy mask and preset and motion detection.**
 Save Default

VIDEO PROFILE 1
 Mode: H.264
 Frame size: 1920x1080
 View window area: 800x450
 Maximum frame rate: 15
 Video quality: Constant bit rate (2M), Fixed quality (Excellent)

VIDEO PROFILE 2
 Mode: JPEG
 Frame size: 640x360
 View window area: 640x360
 Maximum frame rate: 30
 Video quality: Excellent

AUDIO SETTINGS
 Encoding: 6.711
 Audio in: off
 Audio in gain level: 20dB
 Audio out: off
 Audio out volume level: 10
 Save Settings Don't Save Settings

Helpful Hints:
 Higher frame size, frame rate and bit rate gives better video quality. At the same time, it requires more network bandwidth.
 For best viewing results on a mobile phone, we suggest setting the Frame Rate to 5fps and the Bit Rate to 64 kbps.
 Number of active profiles: Number of profiles that you wish to activate. The maximum profiles are three.
 Aspect Ratio: An aspect ratio is the ratio between the width and height of an image.
 Mode: It can be H.264, JPEG or MPEG4. In JPEG mode, the video frames are independent; MPEG4 consumes much less network bandwidth than JPEG, and H.264 can use less bandwidth but better image quality.
 Frame Size: 7 options exist for the sizes of the video display. It is recommended using 176x144 for mobile viewing and 1280x1080 for computer viewing.
 View window area: The viewing region of the current video stream.
 Max frame rate: The maximum number of frames that is displayed in 1 second. 30fps is the highest video quality for this camera. In general, any frame rate above 15 fps is imperceptible to the human eye.
 Video Quality: This limits the maximal refresh frame rate, which can be combined with the "Fixed quality" to optimize the bandwidth utilization and video quality. If the user wants to fix the bandwidth utilization regardless of the video quality, choose "Constant bit rate" and select the desired bandwidth.
 Audio Settings: You can use the option to switch the external microphone on/off or adjust the volume.

Video Quality:

This limits the maximum frame rate, which can be combined with the "Fixed quality" option to optimize the bandwidth utilization and video quality. If fixed bandwidth utilization is desired regardless of the video quality, choose "Constant bit rate" and select the desired bandwidth.

Constant bit rate:

The bps will affect the bit rate of the video recorded by the camera. Higher bit rates result in higher video quality.

Fixed quality:

Select the image quality level for the camera to try to maintain. High quality levels will result in increased bit rates.

Audio in off:

Selecting this checkbox will mute incoming audio.

Audio in gain level:

This setting controls the amount of gain applied to incoming audio to increase its volume.

Audio out off:

Selecting this checkbox will mute outgoing audio.

Audio out volume level:

This setting controls the amount of gain applied to outgoing audio to increase its volume.

The screenshot shows the D-Link DCS-7513 web interface. The top navigation bar includes tabs for LIVE VIDEO, SETUP, ADVANCED, MAINTENANCE, STATUS, and HELP. The left sidebar lists various setup options: Setup Wizard, Network Setup, Dynamic DNS, Image Setup, Audio and Video (selected), Lens Control, Preset, Motion Detection, Time and Date, Event Setup, SD Card, and Logout.

The main content area is titled "AUDIO AND VIDEO" and contains the following sections:

- VIDEO SETTINGS:**
 - Number of active profiles: 2
 - Aspect ratio: 16:9 (Warning: Change the aspect ratio will clear the settings of privacy mask and preset and motion detection.)
- VIDEO PROFILE 1:**
 - Mode: H.264
 - Frame size: 1920x1080
 - View window area: 800x450
 - Maximum frame rate: 15
 - Video quality: Constant bit rate (selected) or Fixed quality (radio buttons).
- VIDEO PROFILE 2:**
 - Mode: JPEG
 - Frame size: 640x360
 - View window area: 640x360
 - Maximum frame rate: 30
 - Video quality: Excellent
- AUDIO SETTINGS:**
 - Encoding: G.711
 - Audio in off: (checkbox)
 - Audio in gain level: 20dB
 - Audio out off: (checkbox)
 - Audio out volume level: 10

Buttons for "Save Settings" and "Don't Save Settings" are located at the bottom of the main content area.

Helpful Hints:

- Higher frame size, frame rate and bit rate gives better video quality. At the same time, it requires more network bandwidth.
- For best viewing results on a mobile phone, we suggest setting the Frame Rate to 30ps and the Bit Rate to 64 kbps.
- Number of active profiles:** Number of profiles that you wish to active. The maximum profiles are three.
- Aspect Ratio:** An aspect ratio is the ratio between the width and height of an image.
- Mode:** It can be H.264, JPEG, or MPEG4. In JPEG mode, the video frames are independent. MPEG4 consumes much less network bandwidth than JPEG, and H.264 can use less bandwidth but better image quality.
- Frame Size:** 7 options exist for the size of the video display. It is recommended using 1920x1080 for mobile viewing and 1920x1080 for computer viewing.
- View window area:** The viewing region of the current video stream.
- Max frame rate:** The maximum number of frames that is displayed in 1 second. 30fps is the highest video quality for this camera. In general, any frame rate above 15 fps is imperceptible to the human eye.

If the User wants to fix the bandwidth utilization regardless of the video quality, choose "Constant bit rate" and select the desired bandwidth.
- Audio Settings:** You can use the option to switch the external microphone on/off or adjust the volume.

Lens Control

The settings on this page allow you to remotely fine tune the zoom and focus to achieve optimal performance.

Focus Mode: Select an option from the drop down menu.
Auto Allow the camera to automatically adjust
Manual Show the Focus Slider control to allow manual adjustment.

	Zoom Control	Use the slider control to fine tune the camera zoom.
	Focus Control	Use the slider control to fine tune the camera focus.

Fine Tune Focus automatically: Allow the camera to adjust the focus automatically.

Preset

This screen allows you to set preset points for the ePTZ function of the camera, which allows you to look around the camera's viewable area by using a zoomed view. Presets allow you to quickly go to and view a specific part of the area your camera is covering, and you can create preset sequences, which will automatically change the camera's view between the different presets according to a defined order and timing you can set.

Note: If your View window area is the same as your Frame size, you will not be able to use the ePTZ function.

Video Profile: This selects which video profile to use.

ePTZ Speed: You may select a value between 0 and 10. 0 is the slowest and 10 is the fastest.

Arrow Buttons and Home Button: Use these buttons to move to a specific part of the viewing area, which you can then set as a preset. Click the Home button to return to the center of the viewing area.

Input Preset Name: Enter the name of the preset you want to create, then click the **Add** button to make a new preset. If an existing preset has been selected from the Preset List, you can change its name by typing in a new name, then clicking the **Rename** button.

Preset List: Click this drop-down box to see a list of all the presets that have been created. You can select one, then click the **GoTo** button to change the displayed camera view to the preset. Clicking the **Remove** button will delete the currently selected preset.

Preset Sequence: This section allows you to create a preset sequence, which automatically moves the camera's view between a set of preset views.

Preset List: To add a preset to the sequence, select it from the drop-down box at the bottom of this window, set the **Dwell time** to determine how long the camera view will stay at that preset, then click the **Add** button. The preset name will appear in the list, followed by the dwell time to view that preset for.

You can rearrange your presets in the sequence by selecting a preset in the sequence, then clicking the arrow buttons to move it higher or lower in the current sequence.

Clicking the trash can button will remove the currently selected preset from the sequence.

If you want to change the dwell time for a preset, select it from the list, enter a new dwell time, then click the **Update** button.

PRESET CONTROL

Using the Pan and Tilt controls, move the camera view to the required position. There are provides the tools for creating and saving Preset positions & Preset Sequence.

Motion Detection

Enabling Video Motion will allow your camera to use the motion detection feature. You may draw a finite motion area that will be used for monitoring. After making any changes, click the **Save Settings** button to save your changes.

Enable Video Motion: Select this box to enable the motion detection feature of your camera.

Sensitivity: Specifies the measurable difference between two sequential images that would indicate motion. Please enter a value between 0 and 100.

Percentage: Specifies the amount of motion in the window being monitored that is required to initiate an alert. If this is set to 100%, motion is detected within the whole window will trigger a snapshot.

Draw Motion Area: Draw the motion detection area by dragging your mouse in the window (indicated by the red square).

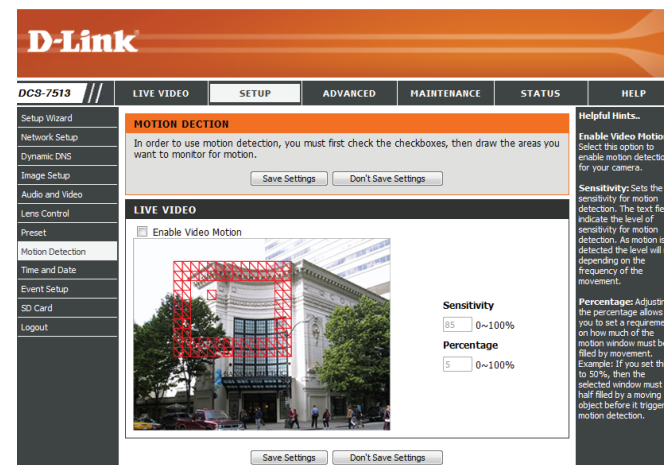

Erase Motion Area: To erase a motion detection area, simply click on the red square that you wish to remove.

Right clicking on the camera image brings up the following menu options:

Select All: Draws a motion detection area over the entire screen.

Clear All: Clears any motion detection areas that have been drawn.

Restore: Restores the previously specified motion detection areas.

Time and Date

This section allows you to automatically or manually configure, update, and maintain the internal system clock for your camera. After making any changes, click the **Save Settings** button to save your changes.

Time Zone: Select your time zone from the drop-down menu.

Enable Daylight Saving: Select this to enable Daylight Saving Time.

Auto Daylight Saving: Select this option to allow your camera to configure the Daylight Saving settings automatically.

Set Date and Time Manually: Selecting this option allows you to configure the Daylight Saving date and time manually.

Offset: Sets the amount of time to be added or removed when Daylight Saving is enabled.

Synchronize with NTP Server: Enable this feature to obtain time automatically from an NTP server.

NTP Server: Network Time Protocol (NTP) synchronizes the DCS-7513 with an Internet time server. Choose the one that is closest to your location.

Set the Date and Time Manually: This option allows you to set the time and date manually.

Copy Your Computer's Time Settings: This will synchronize the time information from your PC.

D-Link

Helpful hints.

Good timekeeping is important for accurate logs and scheduled firewall rules.

Time Zone: Select your time zone from the drop-down menu.

Enable Daylight Saving: Select this to enable the daylight saving time.

Auto Daylight Saving: When you select it, the clock is automatically adjusted according to the daylight saving time of the selected time zone.

Offset: Select the time offset, if your location observes daylight saving time.

Synchronize with NTP Servers: With the option selected, the camera will synchronize the time settings with the NTP server over the Internet whenever the camera starts up. If the timeserver cannot be reached, no time settings will be applied.

NTP Server: Network Time Protocol (NTP) synchronizes the IP camera with an Internet time server. Choose the one that is closest to your location.

Copy Your Computer's Time Settings: This will synchronize the time information from your PC.

Event Setup

In a typical application, when motion is detected, the DCS-7513 sends images to a FTP server or via e-mail as notifications. As shown in the illustration below, an event can be triggered by many sources, such as motion detection. When an event is triggered, a specified action will be performed. You can configure the Network Camera to send snapshots or videos to your e-mail address or FTP site.

To start plotting an event, it is suggested to configure server and media columns first so that the Network Camera will know what action shall be performed when a trigger is activated.

The Event Setup page includes 4 different sections.

- Event
- Server
- Media
- Recording

1. To add a new item - "event, server or media," click **Add**. A screen will appear and allow you to update the fields accordingly.
2. To delete the selected item from the pull-down menu of event, server or media, click **Delete**.
3. Click on the item name to pop up a window for modifying.

D-Link

DCS-7513 // LIVE VIDEO SETUP ADVANCED MAINTENANCE STATUS HELP

EVENT SETUP

There are four sections in Event Setup page. They are event, server, media and recording. Click Add to pop a window to add a new item of event, server, media or recording. Click Delete to delete the selected item from event, server, media or recording. Click on the item name to pop a window to edit it. There can be at most 3 events and 2 recording. There can be at most 5 server and 5 media configurations.

SERVER

Name	Type	Address/Location
Server1	Email	mail.dlink.dli
Add	Server1 ▾	Delete

MEDIA

Media freespace: 6700KB

Name	Type	Source
Media1	Video clip	Profile 1
Add	Media1 ▾	Delete

EVENT

Name	Status	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Time	Trigger
Event1	ON	V	V	V	V	V	V	V	00:00~23:59	Motion
Add	Event1 ▾									Delete

RECORDING

Name	Status	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Time	Source	Destination
Add	▾										Delete

Helpful Hints.

Suggest setting server and media first before setting event. The servers and media which selected in event list are not be able to modify or delete. Please remove them first from the event if you want to delete or modify them. Recommend using different media in different event to make use all media be produced and received correctly. If using the same media in different events and the events trigger almost simultaneously, the servers in the second triggered event will not receive any media; there would be only notifications.

Add Server

You can configure up to 5 servers to save snapshots and/or video to. After making any changes, click the **Save Settings** button to save your changes.

Server Name: Enter the unique name of your server.

E-mail: Enter the configuration for the target e-mail server account.

FTP: Enter the configuration for the target FTP server account.

Network Storage: Specify a network storage device. Only one network storage device is supported.

SD Card: Use the camera's onboard SD card storage.

SERVER

You can set at most 5 different servers here for different event.

SERVER TYPE

Server Name:

☒ **Email**

Sender email address

Server address

User name

Password

Port

☐ This server requires a secure connection (StartTLS)

☐ **FTP**

Server address

Port

User name

Password

Remote folder name

☐ Passive mode

☐ **Network storage**

Network storage location

(for example: \\my_nas(disk)folder)

Workgroup

User name

Password

Primary WINFS server

☐ **SD Card**

Helpful Hints...

"Server name" The unique name for server. There are four kinds of servers supported. They are email server, FTP server, HTTP server and network storage.

Email server: "Sender email address" The email address of the sender. "Recipient email address" The email address of the recipient.

FTP server: "Remote folder name" Granted folder on the external FTP server. The string must conform to that of the external FTP server. Some FTP servers cannot accept preceding slash symbol before the path without virtual path mapping. Refer to the instructions for the external FTP server for details. The folder privilege must be open for upload. "Passive Mode" Check it to enable passive mode in transmission.

Network storage: Only one network storage is supported. "Network storage location" The path to upload the media. "Workgroup" The workgroup for network storage.

SD card: Use the SD card for recording media.

Add Media

There are three types of media, **Snapshot**, **Video Clip**, and **System Log**. After making any changes, click the **Save Settings** button to save your changes.

Media Name: Enter a unique name for media type you want to create.

Snapshot: Select this option to set the media type to snapshots.

Source: Set the video profile to use as the media source. Refer to **Audio and Video** on "Audio and Video" on page 42 for more information on video profiles.

Send pre-event image(s) [0~4]: Set the number of pre-event images to take. Pre-event images are images taken before the main event snapshot is taken.

Send post-event image(s) [0~7]: Set the number of post-event images to take. Post-event images are images taken after the main event snapshot is taken. You can set up to 7 post-event images to be taken.

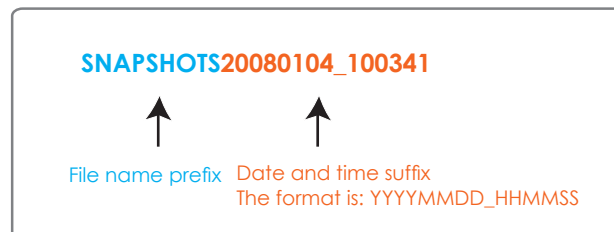

For example:

If both the Send pre-event images and Send post-event images are set to four, a total of 9 images are generated after a trigger is activated.

The screenshot shows the D-Link DCS-7513 web interface. The 'MEDIA' tab is selected, displaying the 'MEDIA TYPE' configuration. The 'Snapshot' option is chosen. The configuration includes a 'Media name' field, a 'Source' dropdown set to 'Profile 1', and input fields for 'Send 1 pre-event image(s) [0~4]' and 'Send 1 post-event image(s) [0~7]'. There is also a 'File Name Prefix' field and a checkbox for 'Add date and time suffix to file name'. 'Save Settings' and 'Don't Save Settings' buttons are at the bottom. A 'Helpful Hints...' sidebar on the right explains the settings: 'Media name' is the unique name; 'Source' is the video profile; 'Send pre-event images' is the number of images before the event; 'Send post-event images' is the number of images after the event; 'File name prefix' is added to the file name; 'Add date and time suffix to file name' adds timing information; 'Video clip' settings include 'Pre-event recording' (interval), 'Maximum duration' (seconds), and 'Maximum file size' (kbytes).

File name prefix: The prefix name will be added on the file name.

Add date and time suffix to file name: Check this to add timing information as file name suffix.

Video clip: Select this option to set the media type to video clips.

Source: Set the video profile to use as the media source. Refer to "Audio and Video" on page 42 for more information on video profiles.

Pre-event recording: This sets how many seconds to record before the main event video clip starts. You can record up to 4 seconds of pre-event video.

Maximum duration: Set the maximum length of video to record for your video clips.

Maximum file size: Set the maximum file size to record for your video clips.

System log: Select this option to set the media type to system logs. This will save the event to the camera system log, but will not record any snapshots or video.

DCS-7513 // LIVE VIDEO SETUP ADVANCED MAINTENANCE STATUS HELP

MEDIA

You can set at most 5 different media here for different event.

Save Settings Don't Save Settings

MEDIA TYPE

Media name:

☒ Snapshot

Source:

Send pre-event image(s) [0~4]

Send post-event image(s) [0~7]

File Name Prefix:

☐ Add date and time suffix to file name

☒ Video Clip

Source:

Pre-event recording: Second(s) [0~4]

Maximum duration: Second(s) [1~100]

Maximum file size: Kbytes [100~5000]

File Name Prefix:

☐ System log

Save Settings Don't Save Settings

Helpful Hints...

"Media name" The unique name for media. There are three kinds of media. They are snapshot, video clip and system log.

Snapshot:

"Source" The source of profile, profile 1 or profile 2.

"Send Pre-event images" The number of pre-event images.

"Send Post-event images" The number of post-event images.

"File name prefix" The prefix name will be added on the file name of the snapshot images.

"Add date and time suffix to file name" Check it to add timing information as file name suffix.

Video clip:

"Source" The source of profile, profile 1 or profile 2.

"Pre-event recording" The interval of pre-event recording in seconds. There are two limitations for video clip file.

"Maximum duration" The maximal recording file duration in seconds.

"Maximum file size" The maximal file size would be generated.

Add Event

Create and schedule up to 3 events with their own settings here. After making any changes, click the **Save Settings** button to save your changes.

Event name: Enter a name for the event.

Enable this event: Select this box to activate this event.

Priority: Set the priority for this event. The event with higher priority will be executed first.

Delay: Select the delay time before checking the next event. It is being used for both events of motion detection and digital input trigger.

Trigger: Specify the input type that triggers the event.

Video Motion Detection: Motion is detected during live video monitoring. Select the windows that need to be monitored.

Periodic: The event is triggered in specified intervals. The trigger interval unit is in minutes.

Digital Input: The external trigger input to the camera.

System Boot: Triggers an event when the system boots up.

Network Lost: Triggers an event when the network connection is lost.

Time: Select **Always** or enter the time interval.

Server: Specify the location where the event information should be saved to.

Add Recording

Here you can configure and schedule the recording settings. After making any changes, click the **Save Settings** button to save your changes.

Recording entry name: The unique name of the entry.

Enable this recording: Select this to enable the recording function.

Priority: Set the priority for this entry. The entry with a higher priority value will be executed first.

Source: The source of the stream.

Recording schedule: Scheduling the recording entry.

Recording settings: Configuring the setting for the recording.

Destination: Select the folder where the recording file will be stored.

Total cycling recording size: Please input a HDD volume between 1MB and 2TB for recording space. The recording data will replace the oldest record when the total recording size exceeds this value. For example, if each recording file is 6MB, and the total cyclical recording size is 600MB, then the camera will record 100 files in the specified location (folder) and then will delete the oldest file and create new file for cyclical recording.

Please note that if the free HDD space is not enough, the recording will stop. Before you set up this option please make sure your HDD has enough space, and it is better to not save other files in the same folder as recording files.

☐ Time of each file for recording: 10 seconds

File Name Prefix:

Save Settings Don't Save Settings

Helpful Hints...

Recording: Enable this option if you want to upload the recording to a shared folder on the network.

Recording schedule: Select the day(s) according to when you want the IP camera to make a video clip.

Always: This enables the IP camera to make video clips continuously.

From: The time range specified for the video clip.

Total cycling recording size: Please input the network path of your network storage, it will like "192.168.1.100/Record". If the network storage need authentication, please enter your user name and password here.

Note: Please Format SD card before use. The entire data in the SD card will be erased after formatting.

Size of each file for recording: If this is selected, files will be separated based on the file size you specify.

Time of each file for recording: If this is selected, files will be separated based on the maximum length you specify.

File Name Prefix: The prefix name will be added on the file name of the recording file(s).

The screenshot displays the D-Link DCS-7513 web interface. The top navigation bar includes tabs for LIVE VIDEO, SETUP, ADVANCED, MAINTENANCE, STATUS, and HELP. The left sidebar lists various setup options: Setup Wizard, Network Setup, Dynamic DNS, Image Setup, Audio and Video, Lens Control, Preset, Motion Detection, Time and Date, Event Setup, SD Card, and Logout. The main content area is titled 'RECORDING' and contains the following sections:

- RECORDING**: A message states, 'You can setup schedule recording to network storage with your specify week day and time period.' Below this are 'Save Settings' and 'Don't Save Settings' buttons.
- RECORDING**: A section for configuring recording details. It includes a 'Recording entry name' text field, an 'Enable this recording' checkbox, a 'Priority' dropdown menu (set to 'normal'), and a 'Source' dropdown menu (set to 'Profile 1').
- RECORDING SCHEDULE**: A section for setting the recording schedule. It features a row of checkboxes for days of the week (Sun, Mon, Tue, Wed, Thu, Fri, Sat), all of which are checked. Below this is a 'Time' section with radio buttons for 'Always' (selected) and 'From' (with time range 00:00 to 23:59).
- RECORDING SETTINGS**: A section for recording parameters. It includes a 'Destination' dropdown menu (set to 'None'), a 'Total cycling recording size' of 1000 Mbytes, and two options for file separation: 'Size of each file for recording' (set to 10 Mbytes) and 'Time of each file for recording' (set to 10 seconds). A 'File Name Prefix' text field is also present.

On the right side of the interface, there is a 'Helpful Hints...' section with the following information:

- Recording**: Enable this option if you want to upload the recording to a shared folder on the network.
- Recording schedule**: Select the day(s) according to when you want the IP camera to make a video clip.
- Always**: This enables the IP camera to make video clips continuously.
- From**: The time range specified for the video clip.
- Total cycling recording size**: Please input the network path of your network storage, it will like '192.168.1.100/Record/'. If the network storage need authentication, please enter your user name and password here.
- Note**: Please Format SD card before use. The entire data in the SD card will be erased after formatting.

SD Card

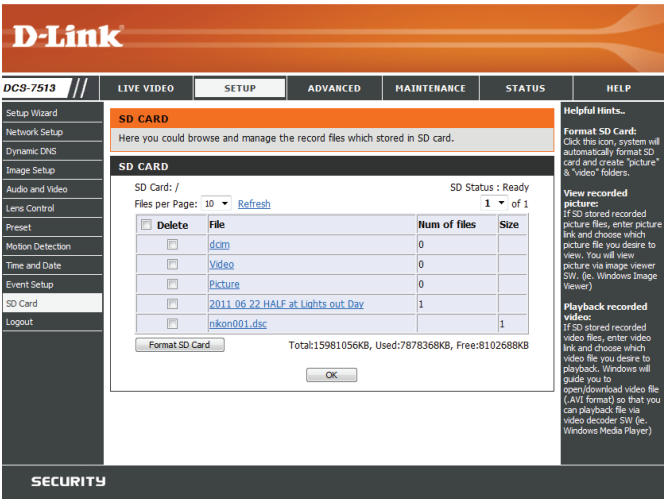

Here you may browse and manage the recorded files which are stored on the SD card.

Format SD Card: Click this icon to automatically format the SD card and create "picture" & "video" folders.

View Recorded Picture: If the picture files are stored on the SD card, click on the picture folder and choose the picture file you would like to view.

Playback Recorded Video: If video files are stored on the SD card, click on the video folder and choose the video file you would like to view.

Refresh: Reloads the file and folder information from the SD card.

Advanced Digital Input/Output

This screen allows you to control the behavior of digital input and digital output devices. The I/O connector provides the physical interface for digital output (DO) and digital input (DI) that is used for connecting a variety of external alarm devices such as IR-Sensors and alarm relays. The digital input is used for connecting external alarm devices and once triggered images will be taken and e-mailed. After making any changes, click the **Save Settings** button to save your changes.

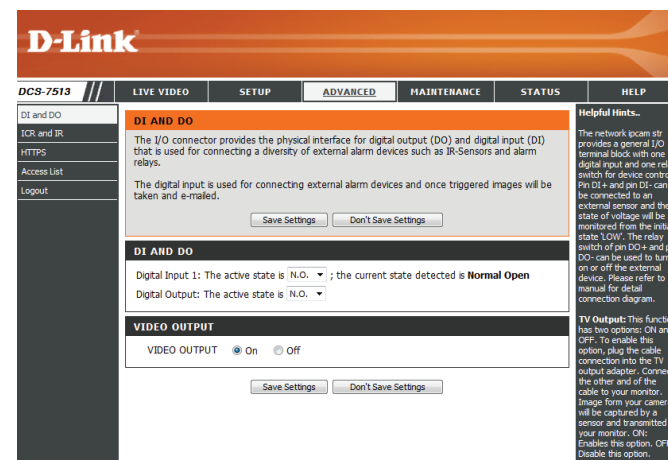

Select D/I or D/O Mode: The camera will send a signal when an event is triggered, depending upon the type of device connected to the DI circuit.

N.C. stands for **Normally Closed**. This means that the normal state of the circuit is closed. Therefore events are triggered when the device status changes to "Open."

N.O. stands for **Normally Open**. This means that the normal state of the circuit is open. Therefore events are triggered when the device status changes to "Closed."

LED: You may specify whether or not to illuminate the status LED on the camera.

Video Output: Enable/ disable the BNC terminal TV output signal.

ICR and IR

Here you can configure the ICR and IR settings. An IR(Infrared) Cut-Removable(ICR) filter can be disengaged for increased sensitivity in low light environments.

Automatic: The Day/Night mode is set automatically. Generally, the camera uses Day mode and switches to Night mode when needed.

Day Mode: Day mode enables the IR Cut Filter.

Night Mode: Night mode disables the IR Cut Filter.

Schedule Mode: Set up the Day/Night mode using a schedule. The camera will enter Day mode at the starting time and return to Night mode at the ending time.

IR Light Control: The camera can enable or disable the IR (infrared) light according to your preferences. This setting provides additional controls depending on your specific application.

Off: The IR light will always be off.

On: The IR light will always be on.

Sync: The IR light will turn on when the ICR sensor is on.

Schedule: The IR light will turn on or off according to the schedule that you specify below.

D-Link

DCS-7513 // LIVE VIDEO SETUP ADVANCED MAINTENANCE STATUS HELP

DI and DO
ICR and IR
HTTPS
Access List
Logout

ICR AND IR

An IR(Infrared) Cut-Removable(ICR) filter can be disengaged from the image path for increased sensitivity in low light environments. The ICR filter will automatically engage depending on the ambient light, allowing the camera to be effective in day/night environments.

1. Select the Day/Night from the radio button. The available options are Automatic, Schedule mode, Day mode and Night mode.
2. The default value is Automatic.

Light Sensor Sensitivity
Light sensor sensitivity has Low, Medium, and High three different levels. You may get current camera light illumination by clicking Refresh button to set proper level of Light sensor sensitivity. For example, when level sets at High less than 30lux, camera will switch Day & Night mode to Night mode.

IR Light
The built-in IR light illuminators will be activated automatically or manually so as to supplement the low light situation without additional equipment.

Save Settings Don't Save Settings

☒ Sync. With ICR

☐ Schedule

IR Light Control On(24hr)
From 07 To 18

Save Settings Don't Save Settings

Helpful Hints.

Automatic: The Day/Night mode is set automatically. It is normally set in the Day mode and changes to the Night mode in a dark place.

Day mode: The Day mode means disable the IR Cut Filter.

Night mode: The Night mode means enable the IR Cut Filter.

Schedule mode: Set the Day/Night mode using the schedule. Fill in the time so the Day/Night mode is normally set to Day mode and it enters the Day mode at the start time and returns to the Night mode at the end time.

IR Light Control: In poor light conditions, open IR Light Control to automatically turn on the light to enable you to take clear picture. The IR Light Control has 4 options: Off, On, Sync. with ICR, and Schedule. Off: This option disable the IR Light Control. On: This option automatically opens the IR Light Control to enable a camera to take clear images in poor light conditions. Sync. with ICR: In this option, the IR Light Control will open automatically and follow the ICR settings. Schedule: In this option, you have to customize the setting to set the time period you want. Please set the Start time and the End time of your chosen schedule.

SECURITY

HTTPS

This page allows you to install and activate an HTTPS certificate for secure access to your camera. After making any changes, click the **Save Settings** button to save your changes.

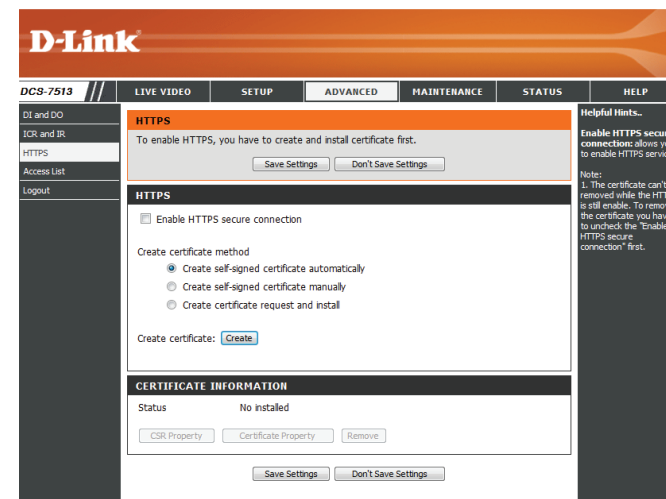

Enable HTTPS Secure Connection: Enable the HTTPS service.

Create Certificate Method: Choose the way the certificate should be created. Three options are available:

Create a self-signed certificate automatically
Create a self-signed certificate manually
Create a certificate request and install

Status: Displays the status of the certificate.

Note: The certificate cannot be removed while the HTTPS is still enabled. To remove the certificate, you must first uncheck **Enable HTTPS secure connection**.

Access List

Here you can set access permissions for users to view your DCS-7513.

Allow list: The list of IP addresses that have the access right to the camera.

Start IP address: The starting IP Address of the devices (such as a computer) that have permission to access the video of the camera. Click **Add** to save the changes made.

Note: A total of seven lists can be configured for both columns.

End IP address: The ending IP Address of the devices (such as a computer) that have permission to access the video of the camera.

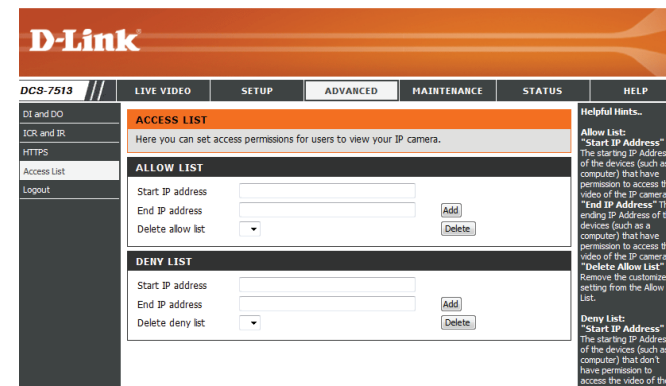

Delete allow list: Remove the customized setting from the Allow List.

Deny list: The list of IP addresses that have no access rights to the camera.

Delete deny list: Remove the customized setting from the Delete List.

For example:

When the range of the Allowed List is set from 1.1.1.0 to 192.255.255.255 and the range of the Denied List is set from 1.1.1.0 to 170.255.255.255. Only users with IPs located between 171.0.0.0 and 192.255.255.255 can access the Network Camera.

Maintenance

Device Management

You may modify the name and administrator's password of your camera, as well as add and manage the user accounts for accessing the camera. You may also use this section to create a unique name and configure the OSD settings for your camera.

Admin Password Setting: Set a new password for the administrator's account.

Add User Account: Add new user account.

User Name: The user name for the new account.

Password: The password for the new account.

User List: All the existing user accounts will be displayed here. You may delete accounts included in the list, but you may want to reserve at least one as a guest account.

Camera Name: Create a unique name for your camera that will be added to the file name prefix when creating a snapshot or a video clip.

Enable OSD: Select this option to enable the On-Screen Display feature for your camera.

Label: Enter a label for the camera, which will be shown on the OSD when it is enabled.

Show Time: Select this option to enable the time-stamp display on the video screen.

The screenshot displays the D-Link DCS-7513 web interface. The top navigation bar includes tabs for LIVE VIDEO, SETUP, ADVANCED, MAINTENANCE (selected), STATUS, and HELP. The left sidebar shows a menu with Admin, System, Firmware Upgrade, and Logout. The main content area is titled 'ADMIN' and contains several sections:

- ADMIN:** A brief description of the admin functions.
- ADMIN PASSWORD SETTING:** Fields for 'New Password' and 'Retype Password', both with a '63 characters maximum' limit and a 'Save' button.
- ADD USER ACCOUNT:** Fields for 'User Name' (20 users maximum), 'New Password' (63 characters maximum), and 'Retype Password', with an 'Add' button.
- USER LIST:** A table with a 'User Name' column and a 'Delete' button.
- DEVICE SETTING:** Fields for 'IP camera Name' (DCS-7513, 63 characters maximum), 'Label' (DCS-7513, 63 characters maximum), and 'Show time' (checked), with a 'Save' button.
- LED:** A section with 'LED' status (On/Off) and a 'Save' button.

Helpful Hints are provided on the right side of the interface.

System

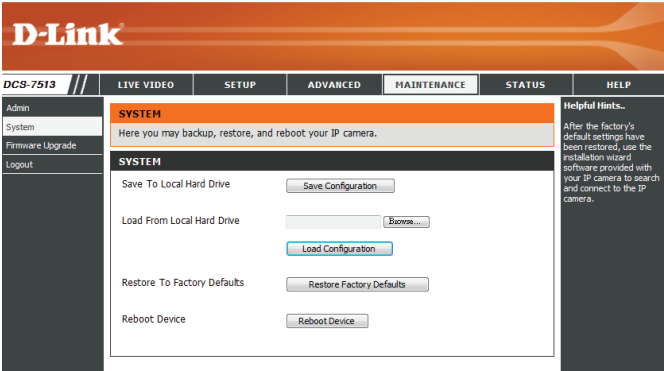

In this section, you may backup, restore and reset the camera configuration, or reboot the camera.

Save To Local Hard Drive: You may save your current camera configuration as a file on your computer.

Local From Local Hard Drive: Locate a pre-saved configuration by clicking **Browse** and then restore the pre-defined settings to your camera by clicking **Load Configuration**.

Restore to Factory Default: You may reset your camera and restore the factory settings by clicking **Restore Factory Defaults**.

Reboot Device: This will restart your camera.

Firmware Upgrade

The camera's current firmware version will be displayed on this screen. You may visit the D-Link Support Website to check for the latest available firmware version.

To upgrade the firmware on your DCS-7513, please download and save the latest firmware version from the D-Link Support Page to your local hard drive. Locate the file on your local hard drive by clicking the **Browse** button. Select the file and click the **Upload** button to start upgrading the firmware.

Current Firmware Version: Displays the detected firmware version.

Current Product Name: Displays the camera model name.

File Path: Locate the file (upgraded firmware) on your hard drive by clicking **Browse**.

Upload: Uploads the new firmware to your camera.
